

NOIDA INTERNATIONAL UNIVERSITY

DEPARTMENT OF BIOTECHNOLOGY & MICROBIOLOGY

SYLLABUS OF COURSES TO BE OFFERED Core Courses, Elective Courses & Ability Enhancement Courses

UNDERGRADUATE PROGRAMME (MICROBIOLOGY) Choice Based Credit System (CBCS)

Preamble

The University Grants Commission (UGC) has initiated several measures to bring equity, efficiency and excellence in the Higher Education System of country. The important measures taken to enhance academic standards and quality in higher education include innovation and improvements in curriculum, teaching-learning process, examination and evaluation systems, besides governance and other matters.

The UGC has formulated various regulations and guidelines from time to time to improve the higher education system and maintain minimum standards and quality across the Higher Educational Institutions (HEIs) in India. The academic reforms recommended by the UGC in the recent past have led to overall improvement in the higher education system. However, due to lot of diversity in the system of higher education, there are multiple approaches followed by universities towards examination, evaluation and grading system. While the HEIs must have the flexibility and freedom in designing the examination and evaluation methods that best fits the curriculum, syllabi and teaching-learning methods, there is a need to devise a sensible system for awarding the grades based on the performance of students. Presently the performance of the students is reported using the conventional system of marks secured in the examinations or grades or both. The conversion from marks to letter grades and the letter grades used vary widely across the HEIs in the country. This creates difficulty for the academia and the employers to understand and infer the performance of the students graduating from different universities and colleges based on grades.

The grading system is considered to be better than the conventional marks system and hence it has been followed in the top institutions in India and abroad. So, it is desirable to introduce uniform grading system. This will facilitate student mobility across institutions within and across countries and also enable potential employers to assess the performance of students. To bring in the desired uniformity, in grading system and method for computing the cumulative grade point average (CGPA) based on the performance of students in the examinations, the UGC has formulated these guidelines.

CHOICE BASED CREDIT SYSTEM (CBCS)

The CBCS provides an opportunity for the students to choose courses from the prescribed courses comprising core, elective/minor or skill-based courses. The courses can be evaluated following the grading system, which is considered to be better than the conventional marks system. Therefore, it is necessary to introduce uniform grading system in the entire higher education in India. This will benefit the students to move across institutions within India to begin with and across countries. The uniform grading system will also enable potential employers in assessing the performance of the candidates. In order to bring uniformity in evaluation system and computation of the Cumulative Grade Point

Average (CGPA) based on student's performance in examinations, the UGC has formulated the guidelines to be followed.

Outline of Choice Based Credit System:

1. **Core Course:** A course, which should compulsorily be studied by a candidate as a core requirement is termed as a Core course.
2. **Elective Course:** Generally, a course which can be chosen from a pool of courses and which may be very specific or specialized or advanced or supportive to the discipline/ subject of study or which provides an extended scope or which enables an exposure to some other discipline/subject/domain or nurtures the candidate's proficiency/skill is called an Elective Course.
 - 2.1 **Discipline Specific Elective (DSE) Course:** Elective courses may be offered by the main discipline/subject of study is referred to as Discipline Specific Elective. The University/Institute may also offer discipline related Elective courses of interdisciplinary nature (to be offered by main discipline/subject of study).
 - 2.2 **Dissertation/Project:** An elective course designed to acquire special/advanced knowledge, such as supplement study/support study to a project work, and a candidate studies such a course on his own with an advisory support by a teacher/faculty member is called dissertation/project.
 - 2.3 **Generic Elective (GE) Course:** An elective course chosen generally from an unrelated discipline/subject, with an intention to seek exposure is called a Generic Elective.

P.S.: A core course offered in a discipline/subject may be treated as an elective by other discipline/subject and vice versa and such electives may also be referred to as Generic Elective.
3. **Ability Enhancement Courses (AEC)/Competency Improvement Courses/Skill Development Courses/Foundation Course:** The Ability Enhancement (AE) Courses may be of two kinds: AE Compulsory Course (AECC) and AE Elective Course (AEEC). "AECC" courses are the courses based upon the content that leads to Knowledge enhancement. They ((i) Environmental Science, (ii) English/MIL Communication) are mandatory for all disciplines. AEEC courses are value-based and/or skill-based and are aimed at providing hands-on-training, competencies, skills, etc.
 - 3.1 AE Compulsory Course (AECC): Environmental Science, English Communication/MIL Communication.
 - 3.2 AE Elective Course (AEEC): These courses may be chosen from a pool of courses designed to provide value-based and/or skill-based instruction.

Project work/Dissertation is considered as a special course involving application of knowledge in solving / analyzing /exploring a real-life situation / difficult problem. A Project/Dissertation work would be of 6 credits. A Project/Dissertation work may be given in lieu of a discipline specific elective paper.

Details of courses

	Theory+ Practical	Theory + Tutorial
I. Core Course		
(14 Papers)	14X4= 56	14X5=70
Core Course Practical / Tutorial*		
(14 Papers)	14X2=28	14X1=14
II. Elective Course		
(8 Papers)		
A.1. Discipline Specific Elective	4X4=16	4X5=20
(4 Papers)		
A.2. Discipline Specific Elective		
Practical/ Tutorial*	4 X 2=8	4X1=4
(4 Papers)		
B.1. Generic Elective/		
Interdisciplinary	4X4=16	4X5=20
(4 Papers)		
B.2. Generic Elective		
Practical/ Tutorial*	4 X 2=8	4X1=4
(4 Papers)		
<ul style="list-style-type: none"> • Optional Dissertation or project work in place of one Discipline Specific Elective paper (6 credits) in 6th Semester 		
III. <u>Ability Enhancement Courses</u>		
1. Ability Enhancement Compulsory		
(2 Papers of 2 credit each)	2 X 2=4	2 X 2=4
Environmental Science		
English/MIL Communication		
2. Ability Enhancement Elective (Skill Based)		
(Minimum 2)	2 X 2=4	2 X 2=4
(2 Papers of 2 credit each)		
<hr/>		
Total credit	140	140

* wherever there is a practical there will be no tutorial and vice-versa

B.Sc. (Hons) Microbiology

Core Papers (C): (Credit: 06 each) (1 period/week for tutorials or 4 periods/week for practical)

1. STUGMB/C01: Bio instrumentation (4 + 4)
2. STUGMB/C02: Elementary Cell Biology (4 + 4)
3. STUGMB/C03: Fundamentals of Biochemistry (4 + 4)
4. STUGMB/C04: Basics of Immunology (4 + 4)
5. STUGMB/C05: Microbial Genetics (4 + 4)
6. STUGMB/C06: Bacteriology & Virology (4 + 4)
7. STUGMB/C07: Environmental Biotechnology (4 + 4)
8. STUGMB/C08: Microbiology (4 + 4)
9. STUGMB/C09: Food technology & Bioprocess technology (4 + 4)
10. STUGMB/C10: Basics of Genetic Engineering (4 + 4)
11. STUGMB/C11: Principle of Genomics and Proteomics (4 + 4)
12. STUGMB/C12: Elementary Molecular Biology (4 + 4)
13. STUGMB/C13: Medical Microbiology (4 + 4)
14. STUGMB/C14: Entrepreneurship (4 + 4)

Discipline Specific Elective Papers: (Credit: 06 each) - DSE 1-4

(4 papers to be selected: 02 each for Odd semester and Even semester as listed below)

1. STUGMB/DSE01: Microbial Biotechnology (4) + Lab (4)
2. STUGMB/DSE02: Animal Biotechnology (4) + Lab (4)
3. STUGMB/DSE04: Industrial Microbiology (4) + Lab (2)
4. STUGMB/DSE05: Parasitology (4) + Lab (4)
5. STUGMB/DSE06: Clinical Research (4) + Lab (4)
6. STUGMB/DSE07: Host Pathogen interaction (4) + Lab (4)
7. STUGMB/DSE08: Biological physics (4) + Lab (4)
8. STUGMB/DSE09: Bio-pesticide & Bio-fertilizer (5) + Tutorial (1)
9. STUGMB/DSE12: Dissertation

Skill Enhancement Courses (02 to 04 papers) (Credit: 02 each)- SEC1 to SEC4

1. STUGMB/SEC01: Molecular Diagnostics
 2. STUGMB/SEC02: Enzymology
 3. STUGMB/SEC03: Industrial Fermentations
 4. STUGMB/SEC04: Basic Instrumentation Skills
 5. STUGMB/SEC05: Fermentation technology
 6. STUGMB/SEC06: Drug Designing
 7. STUGMB/SEC07: Basics of Forensic Science
 8. STUGMB/SEC08: Food technology
 9. STUGMB/SEC09: Bioprocess technology
-

Generic Elective Papers (GE): (Credit: 06 each)

1. STUGMB/GE01: Fund. of Computer Applications (4) + Lab (4)
2. STUGMB/GE02: Operating system (4) + Lab (4)
3. STUGMB/GE03: Chemistry-1 (4) + Lab (4)
4. STUGMB/GE04: Bioinformatics (4) + Lab (4)
5. STUGMB/GE05: Recombinant DNA Technology (4) + Lab (4)
6. STUGMB/GE06: Bioethics, Biosafety and IPR (4) + Lab (4)
7. STUGMB/GE07: Plant Pathology (4) + Lab (4)

Assessment method:

Assessment method	Theory				Practical	
	Internal assessment	Mid-term examination	End-term examination	Maximum Mark	Practical examination	Maximum Mark
Mark	20	20	60	100	50 Mark	50 Mark
%	20%	20%	60%	100%	100%	100%

PEOs, POs & PSOs of B.Sc. Microbiology Programme

Programme Educational Objectives (PEOs):

PEO1: To provide an insight on the fundamentals of Microbiology and microbes as a major component of the ecosystem.

PEO2: Use current microbial technologies and methods for the drug design and implementation of solution in pharmaceutical industry.

PEO3: Practice continuous learning to maintain and achieve personal excellence.

Programme Outcomes / Programme Specific Outcomes are attributes i.e. what students are expected to know or will be able to do when they graduate from a programme.

Programme Outcomes (POs): The POs of BSc Microbiology are as follows:

PO1: Understand the impact of the professional microbiological solutions in societal and environmental contexts, and demonstrate the knowledge of, and need for sustainable development.

PO2: Apply ethical principles and commit to professional ethics and responsibilities and norms of the science practice.

PO3: Recognize the need for, and have the preparation and ability to engage in independent and lifelong learning in the broadest context of technological change.

PO4: An ability to meet desired needs within realistic constraints adapt to sustainability.

PO5: An understanding of professional and ethical responsibility.

PO6: Can become independent researchers and make impactful contributions to the field of Food Microbiology.

PO7: Can take up the jobs of Quality control in various organisations besides research and academics. Instead of becoming job seekers, they are trained to become job providers.

PO8: Students learn to integrate science with society for the overall development of the nation. Are equipped to train manpower, think independently, honesty in research and community service quality inculcated in them will help them in taking up higher studies, set up small scale industries, and develop confidence to take up challenging tasks of research in the field of Microbiology.

Programme Specific Outcomes (PSOs):

PSO1: Understand fundamental principles involved in Microbiology

PSO2: Acquire detail knowledge of microorganisms, their types and significance

PSO3: Understand metabolic and structural significance of bio-molecules

PSO4: Acquaint with concepts of Immunity, Antigen, Antibody and Immune system

PSO5: Understand importance and applications of various enzymes in replication transcription and translations

PSO6: Acquire detail knowledge of industrial production of enzymes, antibiotics and vitamins

SEMESTER-I**

BIO INSTRUMENTATION (STUGMB1/C01)

L	T	P
4	0	2

Course Name: Bio Instrumentation
Course Credit Hour: 4 hrs

Course Code: STUGMB1/C01
Total Contact hour: 60 hrs

Course Objective:

The students learn the physical principles of structure-function relationships in biological macromolecules such as proteins and nucleic acids, as well as the various approaches, techniques and instrumentation associated with structural biology.

Course Description:

This course presents the principles and applications of Biotechnology explaining the biomolecules and applications of biophysical methods. Students will be able to justify the need for buffers, describe how buffers are prepared, and calculate the amount of buffering agent needed when making a particular buffer. On successful completion of the course the students will be aware of Microscopic techniques, Electro physiological methods, Biomolecules structure determination using X-Ray diffraction.

Course Contents:

Unit I: General Biophysical methods: Measurement of pH, pOH, Buffer action, Isoelectric focusing.

Unit II: Separation & Identification of Materials: concept of Chromatography (Partition Chromatography, Paper Chromatography, Adsorption Chromatography, TLC, GLC, Ion Exchange Chromatography, Gel Chromatography, HPLC, Affinity Chromatography); Electrophoresis (Gel Electrophoresis, Paper Electrophoresis).

Unit III: Centrifugation: Basic Principle of Centrifugation, Instrumentation of Ultracentrifuge (Preparative, Analytical), Factors affecting Sedimentation velocity, Standard Sedimentation Coefficient, Centrifugation of associating systems, Rate-Zonal centrifugation, sedimentation equilibrium Centrifugation.

Unit IV: Microscopy: Light microscopy, Bright & Dark Field microscopy, Fluorescence microscopy, Phase Contrast microscopy, TEM, SEM.

Unit V: X-Ray Crystallography: X-ray diffraction, Bragg equation, Reciprocal lattice, Miller indices & Unit cell, Concept of different crystal structure, determination of crystal structure (concept of rotating crystal method, powder method). **Spectroscopy:** Basic concepts, principle, working, care & maintenance and applications of Raman Spectroscopy, NMR Spectroscopy and Absorption Spectroscopy.

Course Learning Outcomes (CLOs):

CLO-1: Enable the student to get sufficient knowledge in principles and applications of bio instruments.

CLO-2. To enable the students to learn the immuno techniques and radio labelling techniques.

CLO-3. To differentiate and analyze the biomedical signal sources.

CLO4. Describe the Basic concept of microscopic techniques such as Light microscopy, Bright & Dark Field microscopy, Fluorescence microscopy, Phase Contrast microscopy, TEM, SEM.

CLO5. Explain the basic principle and application of X-Ray Crystallography and spectroscopy.

**B.Sc. (H) Microbiology 1st Year
SEMESTER-I**

ELEMENTARY CELL BIOLOGY (STUGMB1/C02)

L	T	P
4	0	2

Course Name: Elementary Cell Biology
Course Credit Hour: 4 hrs

Course Code: STUGMB1/C02
Total Contact hour: 60 hrs

Course Objective:

To provide students the knowledge about cellular content, organization, structures and functions. To impart basic understanding of development biology and interaction of cell with environment.

Course Description:

It is an introductory cell biology course. Topics include the structure of the cell and cell components, both eukaryotic and prokaryotic. The processes of DNA replication and gene expression including protein processing and routing. Photosynthesis, respiration, and chemotrophy as means of energy production. The cell cycle and its regulation. These topics will be covered in one semester having four-hour lectures and one two-hour laboratory work per week.

Course Contents:

Unit I: Basics of Cell Biology (Structure & Function): Discovery of cell and Cell Theory; Comparison between plant and animal cells; Cell wall; Plasma membrane; Modification of plasma membrane and intracellular junctions; Cytoskeleton; Protoplasm; Mitochondria; Chloroplast; ER; Golgi complex; Lysosome, endosome and microbodies; Ribosome; Centriole; Nucleus; Chemical components of a cell; Catalysis and use of energy by cells.

Unit II: Biogenesis of Cellular organelles: Biosynthesis of mitochondria, chloroplast, ER, Golgi complex; Biosynthetic process in ER and Golgi apparatus; Protein synthesis and folding in the cytoplasm; Degradation of cellular components.

Unit III: Chromosomes: Chemical composition, structural organization of chromatids, centromeres, telomeres, chromatin, nucleosome organization, eu- and heterochromatin, special chromosomes (e.g. polytene and lampbrush chromosomes), banding patterns in human chromosomes.

Unit IV: Membrane Structure & Transport: Models of membrane structure, Membrane lipids, proteins and carbohydrates; Solute transport by Simple diffusion, Facilitated diffusion and Active transport; Cell adhesion

Unit V: Cell Cycle: An overview of cell cycle; Mitosis and meiosis; Components of cell cycle control system; Programmed cell death (Apoptosis), intrinsic & extrinsic pathways of cell death, Apoptosis in relation with Cancer, Viral disease (AIDS) & Organ transplant.

Course Learning Outcomes (CLOs):

After completion of the course, students will have a basic understanding of cell biology and will be able to demonstrate/explain:

CLO 1: To differentiate between animal as well as plant cells, to recognize and identify the function(s) of the following: centrioles, chromatin, Golgi apparatus, lysosome, microfilaments, microtubules, mitochondrion, nucleus, peroxisome, plasma membrane, rough and smooth endoplasmic reticulum, and ribosomes. An understanding of the ability of enzymes to facilitate chemical reactions. Explain how catalysts, including enzymes, affect and are affected by the chemical reactions in which they participate.

CLO 2: Protein sorting and transport of protein. Understanding of the biochemical processes of photosynthesis, glycolysis, citric acid cycle, and oxidative phosphorylation. Define cellular respiration and identify the cellular locations of the various stages of cellular respiration. Distinguish between the light reactions and the Calvin cycle of photosynthesis.

CLO 3: Chemical composition of nucleic acids (DNA/RNA). Structural Organization of DNA, chromatids, chromosome. Describe the various types of chromosomes on the basis of centromeric position. Chromosomal banding patterns and its application.

CLO 4: Cellular membrane structure and function. Various models of cellular membrane. Composition of cellular membranes. Transport across membrane by simple diffusion, facilitated diffusion and Active transport. Interaction between cells through cell adhesion molecules.

CLO 5: An understanding of how cells grow and divide. Describe the major events of each of the stages of the cell cycle (interphase, G1, G2, S, mitosis, prophase, prometaphase, metaphase, anaphase, telophase, mitotic phase, and cytokinesis). Cell Death and various process associated with cell death.

SEMESTER-I**

FUNDAMENTALS OF COMPUTER APPLICATION (STUGMB1/GE1)

L	T	P
4	0	2

Course Name: Fundamentals of Computer Application **Course Code: STUGMB1/GE1**
Course Credit Hour: 4 hrs **Total Contact hour: 60 hrs**

Course Objective:

It is intended to impart basic undergraduate-level knowledge in the area of computer application. This course will introduce the students with fundamentals of hardware, software and programming.

Course Contents:

Unit-I: Fundamental: H/W and S/W part of computer system, Computer Block Diagram, online processing, time sharing system, real time system, batch system, multiprogramming, multiprocessing, SPOOLING, distributed data processing. Element of computer file, types of files, file processing activities, file design factors, access methods, pros and cons of file organization.

Unit-II: MS office: Introduction to MS Office; Introduction to MSWord; Features & area of use. Working with MS Word.; Menus & Commands; Toolbars & Buttons; Shortcut Menus, Wizards & Templates; Creating a New Document; Different Page Views and layouts; Applying various Text Enhancements; Working with – Styles, Text Attributes; Paragraph and Page Formatting; Text Editing using various features ; Bullets, Numbering, Auto formatting, Printing & various print options.

Unit-III: MS Excel: Introduction and area of use; Working with MS Excel.; concepts of Workbook & Worksheets; Using Wizards; Various Data Types; Using different features with Data, Cell and Texts; Inserting, Removing & Resizing of Columns & Rows; Working with Data & Ranges; Column Freezing, Labels, Hiding, Splitting etc.; Using different features with Data and Text; Use of Formulas, Calculations & Functions; Cell Formatting including Borders & Shading; Working with Different Chart Types; Printing of Workbook.

Course Learning Outcomes (CLOs):

- CLO1.** Understand the basic concept immune system and its importance.
- CLO2.** Discuss Structure, Functions and Properties of different type of Immune Cells and immune organs.
- CLO3.** Describe the Basic characteristics of an antigen and Structure, Types, Functions and Properties of antibodies.
- CLO4.** Explain the Major Histocompatibility Complex I & II molecules, basics of Components of the Complement system.
- CLO5.** Discuss the basic concept of Generation of Immune Response, in particular Generation of Humoral Immune and Cell Mediated Immune Response.

**B.Sc. (H) Microbiology 1st Year
SEMESTER-I**

ENVIRONMENTAL SCIENCES- EVS (STUGMB1/AECC1)

L	T	P
2	0	0

Course Name: Environmental Sciences
Course Credit Hour: 2 hrs

Course Code: STUGMB1/AECC1
Total Contact hour: 30 hrs

Course Objective:

It is intended to impart basic undergraduate-level knowledge in the area of Environmental Sciences. People working in industries or elsewhere essentially require the knowledge of environmental science to enable them to work and produce the most efficient, economical and eco-friendly finished products.

Course Contents:

Unit I: Natural Resources: Forest resources: Use and over-exploitation, deforestation, case studies. Timber extraction, mining, dams and their effects on forests and tribal people, (b) Water resources: Use and over-utilization of surface and ground water, floods, drought, conflicts over water, dams-benefits and problems. (c) Mineral resources: Use and exploitation, environmental effects of extracting and using mineral resources, case studies. (d) Food resources: World food problems, changes caused by agriculture and overgrazing, effects of modern agriculture, fertilizer-pesticide problems, water logging salinity, case studies. (e) Energy resources: Growing energy needs, renewable and non-renewable energy sources, use of alternate energy sources (f) Land resources: Land as a resource, land degradation, man induced landslides, soil erosion and desertification.

Unit II: Ecosystems: Concept of an ecosystem, Structure and function of an ecosystem, Producers, consumers and decomposers, Energy flow in the ecosystem, Ecological succession, Food chains, food webs and ecological pyramids, Introduction, types, characteristic features, structure and function of the following ecosystem :- (a) Forest ecosystem, (b) Grassland ecosystem, (c) Desert ecosystem, (d) Aquatic ecosystems (ponds, streams, lakes, rivers, oceans, estuaries)

Unit III: Biodiversity and its conservation: Introduction – Definition: genetic, species and ecosystem diversity, Biogeographical classification of India, Value of biodiversity: consumptive use, productive use, social ethical, aesthetic and option values. Threats to biodiversity: habitat loss, poaching of wildlife, man-wildlife conflicts, Endangered and endemic species of India, Conservation of biodiversity : In-situ and Ex situ conservation of biodiversity.

Unit VI: Environmental Pollution: Definition, Causes, effects and control measures of: (a) Air pollution, (b) Water pollution, (c) Soil pollution, (d) Marine pollution (e) Noise pollution, (f) Thermal

pollution, (g) Nuclear hazards. Human health risks; Solid waste management: Control measures of urban and industrial waste. Pollution case studies.

Unit V: Environmental Policies & Practices: Sustainability and sustainable development; Climate change, global warming, ozone layer depletion, acid rain and impacts on human communities and agriculture; Environment Laws: Environment Protection Act; Air and Water Wildlife Protection Act; Forest Conservation Act.; Nature reserves, tribal populations and rights, and human wildlife conflicts in Indian context.

Course Learning Outcomes (CLOs):

CLO1. Understand the basic concept immune system and its importance.

CLO2. Discuss Structure, Functions and Properties of different type of Immune Cells and immune organs.

CLO3. Describe the Basic characteristics of an antigen and Structure, Types, Functions and Properties of antibodies.

CLO4. Explain the Major Histocompatibility Complex I & II molecules, basics of Components of the Complement system.

CLO5. Discuss the basic concept of Generation of Immune Response, in particular Generation of Humoral Immune and Cell Mediated Immune Response.

B.Sc. Microbiology 1st Year SEMESTER-II

FUNDAMENTALS OF BIOCHEMISTRY (STUGMB2/C03)

L	T	P
4	0	2

Course Name: Fundamentals of Biochemistry
Course Credit Hour: 4 hrs

Course Code: STUGMB2/C03
Total Contact hour: 60 hrs

Course Objective:

The **course aims** to provide an advanced understanding of the core principles and topics of **Biochemistry** and their experimental basis, and to enable students to acquire a specialised knowledge and understanding of selected aspects by means of a stem/branch lecture series and a research project.

Course Description:

This course introduces students to the general families of biomolecules that comprise the science of biochemistry and to the principles that integrate biochemistry with other chemical and biological disciplines. They acquire knowledge in the quantitative and qualitative estimation of biomolecules.

Course Contents:

Unit 1: Classification and Study of macromolecules: Introduction and classification of Carbohydrate. Lipids, amino acids and Nucleic acid. Interaction between protein-protein, protein-nucleic acid and nucleic acid- nucleic acid. Biochemistry and its scope. Structure, general properties and function of cellular macromolecules.

Unit 2: Carbohydrate metabolism: Glucose Metabolism: Glycolysis; fermentation; anaerobic fate of pyruvate; control of glycolysis; metabolism of hexoses other than glucose; pentose phosphate pathway. **Citric Acid Cycle:** Synthesis of acetyl-coenzyme A; enzymes of the citric acid cycle; regulation of the citric acid cycle; glyoxylate pathway; electron transport and oxidative phosphorylation. Glycogen Metabolism and Gluconeogenesis: Glycogen breakdown; glycogen synthesis; control of glycogen metabolism. Starch Metabolism: Starch synthesis; storage and degradation; abnormal carbohydrate metabolism.

Unit 3: Lipid Metabolism: Digestion; absorption and transport; fatty acid oxidation; ketone bodies; regulation of fatty acid metabolism; cholesterol biosynthesis; fatty acid biosynthesis.

Unit 4: Nitrogen Metabolism: Amino acid biosynthesis (L-Serine, L-Asparagine, L-Alanine, L-Tyrosine, L-Methionine); Nitrogen fixation in plants and microorganisms; nitrate reduction; inborn errors of L-Phenylalanine and L-Tyrosine metabolism; essential amino acids; glucogenic & ketogenic amino acids.

Unit 5: Nitrogen Excretion: The urea cycle; inborn errors involving urea synthesis; catabolism of purine and pyrimidine nucleotides; disorders involving purine metabolism.

Course Learning Outcomes:

C01: Understanding of Biochemistry as a discipline and milestone discoveries in life sciences that led to establishment of Biochemistry as separate discipline

C02: Fundamental properties of elements, their role in formation of biomolecules and in chemical reactions within living organisms

C03: Understanding of the concepts of mole, mole fraction, molarity, etc. and to apply them in preparations of solutions of desired strengths

C04: Unique property of water as a universal solvent and its importance in biological system

C05: Understanding of concepts of acids, bases, indicators, pKa values, etc. Acquiring skill to determine pKa value of amino acids.

**B.Sc. Microbiology 1st Year
SEMESTER-II**

BASICS OF IMMUNOLOGY (STUGMB2/C04)

L	T	P
4	0	2

Course Name: Basics of Immunology
Course Credit Hour: 4 hrs

Course Code: STUGMB2/C04
Total Contact hour: 42 hrs

Course Objective:

It is intended to impart basic undergraduate-level knowledge in the area of Immunology. This course will introduce the students with basic principles of immunology and recent advancements in the field of host immunity, including innate and adaptive immunity.

Course Description:

This course is mainly focused on the host immune system which includes basic concept of immunology, Type of immune system, Classes of immune cells, Antigen-Antibody interaction immune cell tolerance, vaccine technology and other relevant topics.

Course Contents:

Unit 1: Introduction: Basic concepts of Innate and Adaptive immune system, Immune Cells and Immune Organs.

Unit 2: Structure, Functions and Properties of: Immune Cells: Stem cell, T cell, B cell, NK cell, Macrophage, Neutrophil, Eosinophil, Basophil, Mast cell, Dendritic cell; and Immune Organs: Bone Marrow, Thymus, Lymph Node, Spleen, etc.

Unit 3: Antigens and Antibodies: Antigen: Characteristics of an antigen (Foreignness, Molecular size and Heterogeneity); Haptens, Epitopes (T & B cell epitopes); T-dependent and T-independent antigens; Adjuvants. **Antibodies:** Structure, Types, Functions and Properties of antibodies; Antigenic determinants on antibodies (Isotypic, allotypic, idiotypic); VDJ rearrangements; immunodiffusion, immunoelectrophoresis, ELISA, RIA, Monoclonal and Chimeric antibodies.

Unit 4: Major Histocompatibility Complex: Organization of MHC locus (Mice & Human); Structure and Functions of MHC I & II molecules; Antigen processing and presentation (Cytosolic and Endocytic pathways), Complement System: Components of the Complement

system; Activation pathways (Classical, Alternative and Lectin pathways); Biological consequences of complement activation.

Unit 5: Generation of Immune Response: Primary and Secondary Immune Response; Generation of Humoral Immune Response (Plasma and Memory cells), Generation of Cell Mediated Immune Response (Self MHC restriction, T cell activation, Co- stimulatory signals), Killing Mechanisms by CTL and NK cells, Introduction to tolerance; Vaccines.

Course Learning Outcomes (CLOs):

CLO1. Understand the basic concept immune system and its importance.

CLO2. Discuss Structure, Functions and Properties of different type of Immune Cells and immune organs.

CLO3. Describe the Basic characteristics of an antigen and Structure, Types, Functions and Properties of antibodies.

CLO4. Explain the Major Histocompatibility Complex I & II molecules, basics of Components of the Complement system.

CLO5. Discuss the basic concept of Generation of Immune Response, in particular Generation of Humoral Immune and Cell Mediated Immune Response.

**B.Sc. Microbiology 1st Year
SEMESTER-II**

BIOINFORMATICS (STUGMB2/GE2)

L	T	P
4	0	2

Course Name: Bioinformatics
Course Credit Hour: 4 hrs

Course Code: STUGMB2/GE2
Total Contact hour: 60 hrs

Course Objective:

This course is beneficial for students to understand the principles of analyzing biological data, building models and testing hypotheses using computer science algorithms. This course is a survey of algorithms and tools in biological sequence analysis, genome-wide disease association, and precision medicine. Basic concept machine learning and its application in the analysis of biological data are also included in this course.

Course Contents:

Unit 1: Introduction to computer: Classification, characteristics, capabilities and generations, basic components and their functions, hardware (input devices, memory, control units, arithmetic logic units, output devices), software (system software, application software, language low level, high level), interpreter, compiler, data processing, batch, on-line, real time (examples from bio-industries, e.g. application of computers in co-ordination of solute concentrations, pH, temperature etc of a fermenter in operation).

Unit 2: Internal representation of Data: Bits and bytes, binary decimals, octal and hexadecimal system, positive and negative numbers, integers and real, characters and codes-BCD, ASCII and EBCDIC coding, algorithms and flow charts.

Unit 3: Computer Programming: Introduction and application of programming language, elementary idea of development of computer programs.

Unit 4: Introduction to Bioinformatics: History, aims of Bioinformatics, Definition and Concepts, Components of Bioinformatics, Basic tools, Scope of Bioinformatics in molecular biology and Computers, Role of internet in Bioinformatics, Applications of Bioinformatics.

Unit 5: Protein and Nucleic acid databases: Introduction, Protein and Nucleic acid databases, databases accession, database searching, NCBI based study.

Course Learning Outcomes (CLOs):

- CLO1.** Understand the basic concept immune system and its importance.
- CLO2.** Discuss Structure, Functions and Properties of different type of Immune Cells and immune organs.
- CLO3.** Describe the Basic characteristics of an antigen and Structure, Types, Functions and Properties of antibodies.
- CLO4.** Explain the Major Histocompatibility Complex I & II molecules, basics of Components of the Complement system.
- CLO5.** Discuss the basic concept of Generation of Immune Response, in particular Generation of Humoral Immune and Cell Mediated Immune Response.

**B.Sc. Microbiology 2nd Year
SEMESTER-III**

GENETICS (STUGMB3/C05)

L	T	P
4	0	2

Course Name: Genetics
Course Credit Hour: 4 hrs

Course Code: STUGBT3/C05
Total Contact hour: 60 hrs

Course Objective:

The objective of this course is to build knowledge on the fundamentals of genetics, heredity, or inheritance. To build the foundation on the understanding of biological principles.

Course Description:

This course provides a detailed understanding of Mendelian and non-Mendelian inheritance; various techniques and methodologies that decipher genetic recombination, gene mapping and other relevant topics.

Course Contents:

Unit I: Prokaryotic Genomes - Physical organization of bacterial genomes; Structure of the bacterial nucleoid, Replication and partitioning of the bacterial genome and Genome of Archaea.

Unit II: Mechanism of genetic exchange: Plasmid and bacterial sex, Types of plasmids (F Plasmid: a Conjugate plasmid, Mobilization of Non-conjugative plasmid, R plasmid, Col plasmid Copy number and incompatibility), Episomes. Transposable elements (Insertion sequence and transposons, Integrons and Antibiotic-Resistance cassettes, Multiple Antibiotic Resistant bacteria, Mu-virus); Bacterial Genetics (Mutant phenotype, DNA mediated Transformation; Conjugation (Cointegrate Formation and Hfr Cells, Time-of-Entry Mapping, F' Plasmid); Transduction (Generalized transduction, Specialized Transduction)-gene mapping.

Unit III: Molecular Mechanism of gene regulation in prokaryotes - Transcriptional regulation in prokaryotes (inducible and repressible system, positive regulation and negative regulation); Operon concept – lac, trp, Ara operons.

Unit IV: Bacteriophages: Stages in the Lytic Life Cycle of a typical phage, Properties of a phage infected bacterial culture, Specificity in phage infection, *E. coli* Phage T4, *E. coli* Phage T7, *E. coli* phage lambda, Immunity to infection, Prophage integration, Induction of prophage, Induction & Prophage excision, Repressor, Structure of the operator and binding of the

repressor and the Cro product, Decision between the lytic and lysogenic Cycles, Transducing phages, *E.coli* phage phiX174, The lysogenic Cycle.

Unit V: Bacteriophage Genetics: Plaque Formation and Phage Mutants, Genetic recombination in the lytic cycle, (concept of recon, muton, cistron)

Course Learning Outcomes (CLOs):

After successful completion of the course the students:

CLO 1. Will have knowledge of Mendelian, non- Mendelian inheritance and an insight of Gene concept and alleles

CLO 2. Will have an understanding of various methods employed in Gene mapping

CLO 3. Insight of differentiation of sex in plants and animals and various diseases associated with improper differentiation of sex. Evaluate difference between extra-chromosomal inheritances from chromosomal inheritance.

CLO 4. Biochemical changes that lead to difference in inheritance of characters & their expression

CLO 5. Various techniques involved in studying human genetics and their quantification

SEMESTER-III**

BACTERIOLOGY AND VIROLOGY (STUGMB3/C06)

L	T	P
4	0	2

Course Name: Bacteriology and Virology
Course Credit Hour: 4 hrs

Course Code: STUGMB3/C06
Total Contact hour: 60 hrs

Course Objective:

Microbiology and Virology - Amidst the current conditions of the global pandemic, we all know the importance of scientists who are capable of learning and implementing the measures required for handling such microorganisms capable of affecting human life. With the advancement in technologies such as electron microscopy and other visual aids, more and more research and studies along with other productive activities are possible in the field of “Microbiology and Virology”.

Course Description:

This course focus on the basis of Bacteriology and virology. It basically covers the ultrastructure of bacterial, biochemical testing (IMVIC TESTS). It also covers the basis of microbial genetics as well as Classification and replication of viruses.

Course Contents:

Unit 1 : Introduction to Bacteriology: Ultra structure of bacterium & its parts, nutrition requirements & growth curve. History (Louis Pasteur, Robert Koch, Antonie Van Leeuwenhoek, Joseph Lister) Father of (microbiology, bacteriology, virology), aseptic surgery, Robert Hooke. Instrumentation of microbiology (Autoclave, hot air oven, microscope, incubator and laminar air flow) their working principle care & maintenance & types. Classification of bacteria on various things (temperature, morphology, flagella, energy source, pH, cell wall). Sterilization and Infection.

Unit 2: Culture media- inoculation techniques, culture media types and examples, storing and stocking of bacterial culture. Biochemical reactions for Identification of microbes: Colony characteristics, staining technique (Gram Staining, AFB staining, Negative Staining, Special staining), biochemical reactions (IMViC), enzyme tests (Urease, oxidase, coagulase, catalase) carbohydrate utilization test.

Unit 3: Basis of microbial genetics (conjugation, transformation, transduction)

Unit 4: Gram +ve – Staphylococcus, Streptococcus, Clostridium, Corynebacterium. Gram – ve bacteria: E coli, Klebsiella, Pseudomonas, Mycoplasma.

Unit 5: Introduction to virology: Classification of viruses, ultrastructure of viruses, replication of viruses, laboratory diagnosis of viruses, virions and prions. Detail study of (Retro virus, TMV, Rhabdo virus (rabies virus), Polio virus).

Course Learning Outcomes (CLOs):

CLO1. Understand the basic concept of bacteriology, Morphology and Ultra structure of bacteria and its importance.

CLO2. Discuss the general account of prokaryotic genome and plasmid, Conjugation: F-factor, sex Pilli, Hfr cells, mechanism and its role in development of multi drug resistance.

CLO3. Describe the basic characteristics of general characteristics of Viruses, morphological variations, envelope, capsids and nucleic acids of viruses, replication and classification of viruses, viroids, prions.

CLO4. Discuss the basic concept of bacteriophage, detailed description of lambda phage, M13 phage and T phage. One step growth.

**B.Sc. Microbiology 2nd Year
SEMESTER-III**

ENVIRONMENTAL BIOTECHNOLOGY (STUGMB3/C07)

L	T	P
4	0	2

Course Name: Environmental Biotechnology
Course Credit Hour: 4 hrs

Course Code: STUGMB3/C07
Total Contact hour: 60 hrs

Course Objective:

To offer insights on the basic ecological and evolutionary theories and their interrelationships in the environment. Evolution- Definition, scope and history, Darwinian view of life.

Course Description:

This course presents the Study and the Management of the Environment Goals: To make the student to understand Ecology and Conservation of the Environment Objectives: On successful completion of the subject the student should have understood Ecosystem, energy flow and Uses and values of Biodiversity

Course Contents:

Unit 1: Microorganisms and their Habitats: Structure and function of ecosystems; Terrestrial Environment: Soil profile and soil microflora; Aquatic Environment: Microflora of fresh water and marine habitats; Atmosphere: Aeromicroflora and dispersal of microbes; Animal Environment: Microbes in/on human body (Microbiomics) & animal (ruminants) body. Extreme Habitats: Extremophiles: Microbes thriving at high & low temperatures, pH, high hydrostatic & osmotic pressures, salinity, & low nutrient levels. Microbial succession in decomposition of plant organic matter

Unit 2: Microbial Interactions: Microbe interactions: Mutualism, synergism, commensalism, competition, amensalism, parasitism, predation, Microbe-Plant interaction: Symbiotic and non symbiotic interactions. Microbe-animal interaction: Microbes in ruminants, nematophagus fungi and symbiotic luminescent bacteria

Unit 3: Biogeochemical Cycling: Carbon cycle: Microbial degradation of cellulose, hemicelluloses, lignin and chitin, Nitrogen cycle: Nitrogen fixation, ammonification, nitrification, denitrification and nitrate reduction, Phosphorus cycle: Phosphate immobilization

and solubilisation, Sulphur cycle: Microbes involved in sulphur cycle, Other elemental cycles: Iron and manganese

Unit 4: Waste Management: Solid Waste management: Sources and types of solid waste, Methods of solid waste disposal (composting and sanitary landfill), Liquid waste management: Composition and strength of sewage (BOD and COD), Primary, secondary (oxidation ponds, trickling filter, activated sludge process and septic tank) and tertiary, sewage treatment

Unit 5: Microbial Bioremediation: Principles and degradation of common pesticides, organic (hydrocarbons, oil spills) and inorganic (metals) matter, biosurfactants,

Course Learning Outcomes:

CLO1. Provides knowledge about basic terminologies used in environmental biotechnology

CLO2. Explain the microbial processes and growth requirements underlying the activated sludge process, nitrification, denitrification, enhanced phosphorus removal, and anaerobic digestion

CLO3. Role of biogeochemical cycle concept and its applications in ecological balance

CLO4. To understand the knowledge of microbial clean up the polluted environmental biotechnology

CLO5. Evaluate the potential for biodegradation of organic pollutants, taking microbial and physical/chemical environments, as well as the chemical structure of the compound itself, into consideration

B.Sc. Microbiology 2nd Year SEMESTER-III

FERMENTATION TECHNOLOGY (STUGMB3/SEEC1)

L	T	P
2	0	0

Course Name: Fermentation Technology
Course Credit Hour: 2 hrs

Course Code: STUGMB3/SEEC1
Total Contact hour: 30 hrs

Course Objective:

This course introduces various aspects of applied and industrial microbiology. The course helps the students to learn every important upstream and downstream components of fermentation process including strain selection, development, media design, formulation and recovery of products. Additionally, the course can educate the students about fermenter design, different types of fermentations and also the current trend of fermentation process in biotech-industry. Overall, the course helps in the student's exposure on industrial applications of bioprocesses.

Course Description:

To impart knowledge about biological and biochemical technology, with a focus on biological products, the design and operation of industrial practices

Course Contents:

Unit I: Introduction to Fermentation technology: History, Scope and Development of Fermentation technology; Isolation and screening of industrially important microorganisms – primary and secondary screening; Maintenance of Strains; Strain improvement: Mutant selection and Recombinant DNA technology.

Unit II: Fermentation media: Natural and Synthetic media; Basic components of an media (Carbon sources; Nitrogen sources; Vitamins; Minerals; Anti-foaming agents); Role of buffers in media; Process of aeration, and agitation.

Unit III: Fermenter design: Basic designs of Fermenter; Type of fermenters: Wald of, Tower, Deepjet, Cyclone column, Packed tower and airlift fermenter; Scale up study and Product development; Down-stream processing and Product recovery; Regulation and safety.

Unit IV: Production of Microbial Products: Production of alcohol; Organic acid – Citric acid; Antibiotic – Penicillin, Amino acid – Glutamic acid; Vitamin – B1; Single Cell Protein (SCP).

Course Learning Outcomes (CLOs):

CLO1. The students shall get an adequate knowledge on evaluate factors that contribute in enhancement of cell and product formation during fermentation process..

CLO2. Understand the kinetics of cell and product formation in batch, continuous and fed-batch cultures and different types of fermenters.

CLO3. Students should get enough information on Basic designs of Fermenter; Type of fermenters

LO4. Discuss the protocol of the production of alcohol, organic acid, antibiotic, amino acid and other biological materials

**B.Sc. Microbiology 2nd Year
SEMESTER-III**

BIOETHICS, BIOSAFETY AND IPR (STUGMB3/GE3)

L	T	P
4	2	0

Course Name: Bioethics, Biosafety and IPR
Course Credit Hour: 4 hrs

Course Code: STUGMB3/SEC1
Total Contact hour: 60 hrs

Course Objective:

To apprise the students of the various societal, governance and regulatory issues in biotechnology with special emphasis on ethics, safety and intellectual property rights. Through this course, the students develop a perspective on the importance of these aspects in the success of biotechnology products and services in the market. At the end of the course, they should be able to apply this perspective and the specific principles, laws, regulations etc., in academic and industrial settings for regulatory oversight and enforcement.

Course Description:

This course is mainly focused on the Bioethics, Biosafety and Intellectual Property Rights which includes basic concept of patents, patent regime (in India and abroad) registration aspects and other details.

Course Contents:

Unit 1: Biosafety: Introduction; biosafety issues in biotechnology; Biological Safety Cabinets & their types; Primary Containment for Biohazards; Biosafety Levels of Specific Microorganisms

Unit II: Biosafety Guidelines: Biosafety guidelines and regulations (National and International); GMOs/LMOs- Concerns and Challenges; Role of Institutional Biosafety Committees (IBSC), RCGM, GEAC etc. for GMO applications in food and agriculture; Environmental release of GMOs; Risk Analysis; Risk Assessment; Risk management and communication; Overview of International Agreements - Cartagena Protocol. **AERB/RSD/RES:** Guidelines for using radioisotopes in laboratories and precautions.

Unit III: Introduction to Intellectual Property: Patents, Types, Trademarks, Copyright & Related Rights, Industrial Design and Rights, Traditional Knowledge, Geographical Indications- importance of IPR – patentable and non patentables – patenting life – legal

protection of biotechnological inventions – World Intellectual Property Rights Organization (WIPO).

Unit IV: Grant of Patent and Patenting Authorities: Types of patent applications: Ordinary, PCT, Conventional, Divisional and Patent of Addition; An introduction to Patent Filing Procedures; Patent licensing and agreement; Patent infringement- meaning, scope, litigation, case studies, Rights and Duties of patent owner. **Agreements and Treaties:** GATT, TRIPS Agreements; Role of Madrid Agreement; Hague Agreement; WIPO Treaties; Budapest Treaty on international recognition of the deposit of microorganisms; UPOV & Brene conventions; Patent Co-operation Treaty (PCT); Indian Patent Act 1970 & recent amendments.

Course Learning Outcomes (CLOs):

CLO1. The students shall get an adequate knowledge on patent and copyright. This provide further way for developing their idea or innovations.

CLO2. Identify the role of regulatory committees in controlling the risk.

CLO3. Students should get enough information on ethical issues linked to research on animal models, transgenics, clinical trials.

CLO4. Students to consider Intellectual Property (IP) as a career option as IP Counsel/Patent Examiner/Patent agent.

Text Books:

- Singh K K (2015). Biotechnology and Intellectual Property Rights: Legal and Social Implications, Springer India.

**B.Sc. Microbiology 2nd Year
SEMESTER-IV**

MICROBIOLOGY (STUGMB4/C08)

L	T	P
4	0	2

Course Name: Microbiology
Course Credit Hour: 4 hrs

Course Code: STUGMB4/C08
Total Contact hour: 60 hrs

Course Objective:

This course focus on the basis of applied microbiology technology and their techniques. It basically covers the Air microbiology, sewage microbiology, water microbiology etc. It also covers the scope and importance of sources of contamination of milk, desirable and undesirable changes in milk, milk borne diseases, Microbial examination of water, Water borne diseases etc.

Course Description:

Microbiology course involves the study of microorganisms with particular emphasis on the biology of bacteria, viruses, fungi and protozoan parasites. You will also cover aspects of the biochemistry, physiology and genetics of microorganisms. Introduction to Microbiology is appropriate for students with some background in biology and chemistry whose career path intersects the study of microbes or simply have an interest in microbiology. This course introduces the basic principles of microbiology examining the microbes that inhabit our planet and their effect on the biosphere. Introduction to Microbiology explores this impact through the lens of all areas of microbiology.

Course Contents:

Unit I: Historical developments: Discovery of microorganisms, Spontaneous Generation Controversy, Germ theory of fermentation, Germ theory of disease.

Unit II: Air Microbiology: Definition and composition of air, sources of microorganisms in air, significance of microorganisms in air, droplet, droplet nuclei and droplet infection, air borne diseases, enumeration of microorganisms in air, control of microorganisms in air, air pollution.

Unit III: Water Microbiology: Types of water, Sources of microorganisms in water, Significance of microorganisms in water, Fecal contamination of water, Index of water pollution, Different indicator microorganisms, Coliform bacteria, Microbial examination of water, Water borne diseases

Unit IV: Sewage Microbiology: Definition of sewage, composition and strength of sewage (BOD and COD), Microbiology of sewage, Domestic sewage treatment, Municipal sewage treatment, Water purification, Water reclamation.

Unit V: Milk Microbiology: Definition and composition of milk, sources of contamination of milk, desirable and undesirable changes in milk, milk borne diseases, bacteriological examination of milk, reductase test, pasteurization of milk, application of microorganisms in dairy industry (examples and microflora).

Course Learning Outcomes: (CLOs):

CLO1. History of air microbiology and significance of microorganisms in air, water, sewage and soil.

CLO2. Micro-organisms in natural food products and their control.

CLO3. Scope and importance of Microbial examination of air, water and soil.

CLO4. Introduction to Water purification, Water reclamation.

CLO5. Objectives, importance and functions of Milk quality and milk borne diseases.

Text Books:

B.Sc. Microbiology 2nd Year SEMESTER-IV

FOOD TECHNOLOGY & BIOPROCESS TECHNOLOGY (STUGMB4/C09)

L	T	P
4	0	2

Course Name: Food and bioprocess technology
Course Credit Hour: 4 hrs

Course Code: STUGMB4/C09
Total Contact hour: 60 hrs

Course Objective:

This course focus on the basis of bioprocess technology and their techniques. It basically covers the spoilage of food stuffs and food processing. It also covers the scope and importance of packaging and functions of quality control, the essential prerequisites for preservation of food stuffs and preserving techniques.

Course Description:

Food Technology is a science branch that deals with the techniques involved in production, processing, preservation, packaging, labeling, quality management, and distribution of food products. To impart knowledge on different configurations of bioreactors, optimization and fermentation process control, which are required for novel bioprocess applications such as in food, environment, pharmaceuticals and tissue culture systems.

Course Contents:

Unit 1: Foods as a substrate for microorganisms: Intrinsic and extrinsic factors that affect growth and survival of microbes in foods, natural flora and source of contamination of foods in general.

Unit 2: Microbial spoilage of various foods: Principles, Spoilage of vegetables, fruits, meat, eggs, milk and butter, bread, canned Foods

Unit 3: Principles and methods of food preservation: Principles, physical methods of food preservation: temperature (low, high, canning, drying), irradiation, hydrostatic pressure, high voltage pulse, microwave processing and aseptic packaging, chemical methods of food preservation: salt, sugar, organic acids, SO₂, nitrite and nitrates, ethylene, oxide, antibiotics and bacteriocins.

Unit 4: Fermented foods: Dairy starter cultures, fermented dairy products: yogurt, acidophilus milk, kumiss, kefir, dahi and cheese, other fermented foods: dosa, sauerkraut, soy sauce and

tamph, Probiotics: Health benefits, types of microorganisms used, probiotic foods available in market.

Unit 5: Food borne diseases (causative agents, foods involved, symptoms and preventive measures): Food intoxications: *Staphylococcus aureus*, *Clostridium botulinum* and mycotoxins; Food infections: *Bacillus cereus*, *Vibrio parahaemolyticus*, *Escherichia coli*, *Salmonellosis*, *Shigellosis*, *Yersinia enterocolitica*, *Listeria monocytogenes* and *Campylobacter jejuni*. Cultural and rapid detection methods of food borne pathogens in foods.

Unit 6: Food sanitation and control: HACCP, Indices of food sanitary quality and sanitizers

Course Learning Outcomes (CLOs):

- CLO1.** Understand the basic background of microbiology of food stuffs.
- CLO2.** Discuss the Micro-organisms in natural food products and their control.
- CLO3.** Describe the Basic Scope and importance of food processing.
- CLO4.** Explain the basic concept of food packaging.
- CLO5.** Discuss the basic concept of food intoxications and infections. Explain the cultural and rapid detection methods of food borne pathogens in foods.

**B.Sc. Microbiology 2nd Year
SEMESTER-IV**

BASICS OF GENETIC ENGINEERING (STUGMB4/C10)

L	T	P
4	0	2

Course Name: Basics of Genetic Engineering
Course Credit Hour: 4 hrs

Course Code: STUGMB4/C10
Total Contact hour: 60 hrs

Course Objective:

It is intended to impart basic undergraduate-level knowledge in the area of genetic engineering. This course will make the students familiar about the translation machinery and concept of r-DNA technology and their application in advanced research.

Course Description:

This course is mainly focused on the basic concept of genetic engineering which includes basic knowledge in the area of molecular biology and recombinant DNA technology. The student would be able to understand the working details of the cloning of a gene. They would also be able to assimilate recent research findings, advancement and development in the relevant subject.

Course Contents:

Unit I: Molecular Tools: Restriction Enzymes: Types I, II and III; Linkers and adaptors; Sites of cleavage (Isoschizomers, neoschizomers; and isocaudomers); DNA modifying enzymes; End-modifying enzymes and their applications.

Unit II: Vectors: properties of vectors; Plasmid vectors; Viral vectors; Cosmids; Fosmids; YAC; PAC; shuttle vectors. Vectors for plants and Animals.

Unit III: Recombinant Screening: Selection of transformed cells; DNA introduction into host cells- bacterial cell (chemical method and electroporation) and plant cell (Direct gene transfer and vector mediated gene transfer); in animals (transduction and transfection).

Unit IV: Polymerase chain reaction: Primer designing; Reaction cycles; Modifications to PCR techniques (Asymmetric PCR, RT-PCR, Quantitative Real time PCR, Inverse PCR, RACE, RAPD, AFLP).

Unit V: Genetic Engineering in Animals: Primary and secondary cultures; cell lines; Culture media; Growth patterns. Applications of animal cell culture. **Genetic Engineering in Plants:** Gene transfer strategies; Ti plasmid; Strategies for production of transgenic plants; Applications; Molecular farming

Course Learning Outcomes (CLOs):

CLO1. Understand the basic concept of molecular tool such as restriction enzyme and its application.

CLO2. Discuss the concept of Plasmid vectors; Viral vectors; Cosmids; Fosmids; YAC; PAC; shuttle vectors

CLO3. Describe the preparation of transformed cells; DNA introduction into host cells- bacterial cell (chemical method and electroporation) and plant cell (Direct gene transfer and vector mediated gene transfer)

CLO4. Explain the major PCR techniques.

CLO5. Discuss the basic concept of genetic engineering in Animal and Plant cells.

**B.Sc. Microbiology 2nd Year
SEMESTER-IV**

BASICS OF FORENSIC SCIENCES (DNA) (STUGBT4/ SEEC2)

L	T	P
2	0	0

Course Name: Basics of Forensic Sciences (DNA)
Course Credit Hour: 2 hrs

Course Code: STUGBT4/SEEC2
Total Contact hour: 40 hrs

Course Objective:

It is intended to impart basic undergraduate-level knowledge in the area of DNA forensic sciences. This course will make the students familiar about the general information about forensic sciences focused on DNA based methods and their application in forensic research.

Course Description:

This course is mainly focused on the basic concept of forensic sciences which includes basic knowledge in the area of molecular biology techniques and associated tools. The student would be able to understand the working details of the biological blueprint of life. They would also be able to assimilate recent research findings, advancement and development in the relevant subject.

Course Contents:

Unit I: History of Development of Forensic Science in India: Functions of forensic science. Historical aspects of forensic science. Definitions and concepts in forensic science. Scope of forensic science. Need of forensic science. Basic principles of forensic science. Frye case and Daubert standard

Unit II: Organizational set up of Forensic Science Laboratories in India: Hierarchical set up of Central Forensic Science Laboratories, State Forensic Science Laboratories, Fingerprint Bureaus, Basic services and optional services.

Unit III: Basic Principles DNA as biological blueprint of life. Extraction of DNA for analysis. Quantitation of DNA – yield gel quantitation and slot blot quantitation. Forensic DNA Typing Collection of specimens. Polymerase chain reaction – historical perspective, sequence polymorphisms, individualization of evidence.

Unit IV: Basic tools used in DNA forensic science: Instrumentation Sample preparation for chromatographic and spectroscopic evidence. Chromatographic methods. Fundamental

principles and forensic applications of thin layer chromatography, gas chromatography and liquid chromatography. Spectroscopic methods. Fundamental principles and forensic applications of Ultravioletvisible spectroscopy. Colorimetric analysis and Lambert-Beer law.

Course Learning Outcomes (CLOs):

CLO1. Understand the fundamental principles, functions and significance of forensic science to human society.

CLO2. Describe the organizational set up of Forensic Science Laboratories in India.

CLO3. Describe the collection method of specimens, isolation of DNA from different specimens, and amplification of DNA using PCR.

CLO4. Explain the basic tools used in DNA forensic science.

Text Books:

- Pierce BA (2011) Genetics: A Conceptual Approach, 4th Ed., Macmillan Higher Education Learning

**B.Sc. Microbiology 2nd Year
SEMESTER-IV**

PLANT PATHOLOGY (STUGMB4/SEC2)

L	T	P
4	0	2

Course Name: Plant Pathology
Course Credit Hour: 4 hrs

Course Code: STUGMB4/SEC2
Total Contact hour: 60 hrs

Course Objective:

It is intended to impart basic undergraduate-level knowledge in the area of Plant Pathology. This course will introduce the students with basic concept of plant disease- definitions of disease, disease cycle & pathogenicity, symptoms associated with microbial plant diseases.

Course Description:

This course is mainly focused on the host pathogen interaction. A study of the nature and causes of disease in plants, emphasizing the principal diseases in India. Practical hands on training for identification of disease symptoms at earliest stage. Making students aware about the ambience plants and related diseases and treatment if any, especially biological control.

Course Contents:

Unit I: Introduction and History of plant pathology: Concept of plant disease- definitions of disease, disease cycle & pathogenicity, symptoms associated with microbial plant diseases, types of plant pathogens, economic losses and social impact of plant diseases. Significant landmarks in the field of plant pathology- Contributions of Anton DeBary, Millardet, Burrill, E. Smith, Adolph Mayer, Ivanowski, Diener, Stakman, H.H. Flor, Van Der Plank, molecular Koch's postulates. Contributions of eminent Indian plant pathologists.

Unit II: Stages in development of a disease: Infection, invasion, colonization, dissemination of pathogens and perennation.

Unit III: Plant disease epidemiology: Concepts of monocyclic, polycyclic and polyetic diseases, disease triangle & disease pyramid, forecasting of plant diseases and its relevance in Indian context.

Unit IV: Host Pathogen Interaction: A. Microbial Pathogenicity Virulence factors of pathogens: enzymes, toxins (host specific and non-specific) growth regulators, virulence factors in viruses (replicase, coat protein, silencing suppressors) in disease development. Effects of pathogens on host physiological processes (photosynthesis, respiration, cell membrane permeability, translocation of water and nutrients, plant growth and reproduction).

Unit V: Control of Plant Diseases: Principles & practices involved in the management of plant diseases by different methods, viz. regulatory - quarantine, crop certification, avoidance of pathogen, use of pathogen free propagative material cultural - host eradication, crop rotation, sanitation, polyethylene traps and mulches chemical - protectants and systemic fungicides, antibiotics, resistance of pathogens to chemicals.

Unit VI: Specific Plant diseases: Study of some important plant diseases giving emphasis on its etiological agent, symptoms, epidemiology and control. Cucuta, Loranthuus, Orobanche and striga.

Course Learning Outcomes (CLOs):

CLO1. To introduce concepts and principles of plant pathology

CLO2. To acquaint with different strategies for management of plant diseases

CLO3. To acquaint with different strategies for management of higher yield from healthy soil.

CLO4. To impart knowledge on detection and diagnosis of plant diseases and their management.

CLO5. To study principles and application of ecofriendly and sustainable management strategies of plant diseases.

SEMESTER-V**

PRINCIPLE OF GENOMICS AND PROTEOMICS (STUGMB5/C11)

L	T	P
4	2	0

Course Name: Principle of Genomics and Proteomics
Course Credit Hour: 4 hrs

Course Code: STUGMB5/C11
Total Contact hour: 42 hrs

Course Objective:

It is intended to impart basic undergraduate-level knowledge in the area of Genomics and Proteomics. It also aims to familiarize them with the developments in the experimental approaches used by researchers to understand the complexity and diversity of genomes. Recent advances in genomics have transformed the way in which biologists study cells and biological systems. Furthermore, this course also provides knowledge of the use of high throughput techniques to study the entire range of proteins present in any cell/tissue/organism under specific conditions, to obtain a global view of cellular processes at the protein level.

Course Description:

This course is mainly focused on the Genomics and Proteomics and discuss the basic concept of genomics, such as origin, evolution and application of genomics and proteomics. This course also focuses to elaborates the Genomic and Proteomics techniques; from basic to advance level. It covers basic understanding of Genomics, Annotation of whole genome sequence & functional genomics, Pharmacogenomics and Proteomics.

Course Contents:

Unit I: Origin and Evolution of genomics: Study and Scope: Introduction, definition concepts and approaches of proteomics studies and activities. Origin of genomics, the first DNA genomes, microsatellite and SCOT, DNA based phylogenetic trees, genomes and human evolution, evolution of nuclear and organelle (mitochondrial and Chloroplast genome), Anticipated Benefits of Genome Research

Unit II: Molecular maps of genomes and comparative genomics: Genetic maps, physical maps, EST and transcript maps, functional maps, comparative genomics and collinearity/synteny in maps.

Unit III: Whole Genome sequencing: Whole genome shotgun sequencing, clone-by-clone or 'hierarchical shotgun' sequencing, microbial genomes, plant genomes and animal genomes.

Unit IV: Annotation of whole genome sequence and functional genomics: *In silico* methods, insertion mutagenesis (T-DNA and transport insertion), EST contigs and unigene sets, use of DNA chips and microarrays.

Unit V: Pharmacogenomics: Use in biomedicine involving diagnosis and treatment of diseases, genomics in medical practice, personalized medicine, DNA polymorphism and treatment of diseases, use of SNP in pharmacogenomics, pharmacogenomics and industry.

Course Learning Outcomes (CLOs):

CLO1. Gain an understanding of the basic concepts of genomics and its scope.

CLO2. Outline the fundamental of DNA based phylogenetic trees.

CLO3. Discuss the Annotation of whole genome sequence and functional genomics.

CLO4. Describe the basic concepts of pharmacogenomics and its future prospective.

CLO5. Explain the fundamentals of proteomics and advance molecular biology techniques.

Text Books:

**B.Sc. Microbiology 3rd Year
SEMESTER-V**

ELEMENTARY MOLECULAR BIOLOGY (STUGMB5/C12)

L	T	P
4	0	2

Course Name: Elementary Molecular Biology
Course Credit Hour: 4 hrs

Course Code: STUGBT5/C12
Total Contact hour: 60 hrs

Course Objective:

It is intended to impart basic undergraduate-level knowledge in the area of Molecular Biology. This course will introduce the students with basic and advanced knowledge of molecular biology such as understand molecular Biological processes like DNA replication, transcription, repair systems and other relevant topics.

Course Description:

This course is mainly focused on the Elementary Molecular Biology which will provide the technical details and use of different gene expression systems for overexpression of recombinant proteins and protein complexes for different applications. The course will also provide details about the purification of proteins expressed in different expression systems..

Course Contents:

Unit I: Molecular of Life: An introduction experimental proof of DNA and RNA as genetic Material, Nucleic Acids, Structure and function of DNA and RNA, Watson and Crick model of DNA and other forms of DNA (A and Z), Functions of DNA and RNA including ribosome's.

Unit II: DNA Replication: Prokaryotic and Eukaryotic-Enzymes and proteins involved in replication, Theta model and Rolling circle model. Mechanism of DNA replication, replication origin and replication fork, DNA repair

Unit III: DNA Repair: Causes and mechanism –photo reactivation, excision repair, mismatch repair, SOS repair. Recombination in prokaryotes, Transformations, Conjugation and Transduction. Wobble hypothesis.

Unit IV: Transcription and Translation: Transcription in Prokaryotes and Eukaryotes, Mechanism, promoters and RNA polymerase, transcription factors, post transcriptional, modifications a eukaryotic mRNA. Translation: Mechanism of translation in Prokaryotes and

Eukaryotes. Ribosomes, mechanism of translation, post translational modification, translational inhibitors, and genetic code.

Unit V: Regulation of Gene expression: Regulation of Gene expression in Prokaryotes- Person concept (Lac and Trip), Regulation of Gene expression in Eukaryotes –transcriptional activation. Transposable elements in Maize and Drosophila, gene silencing.

Course Learning Outcomes (CLOs):

CLO1. Students who study the molecular biology re able to understand the central dogma

CLO2. Students who earn the plant pathology minor will integrate plant pathology principles into the understanding of their major discipline(s) through the study of agronomic diseases, horticultural diseases, turf diseases, entomology, applied microbiology, biotechnology and other relevant career fields.

CLO3. To learn to observe how mutation can cause the change in gene expression

CLO4.To learn various agents of DNA mutation and its repair

CLO5. Discuss the basic concept of Gene expression in Prokaryotes-Person concept (Lac and Trip), Regulation of Gene expression in Eukaryotes.

Text Books:

SEMESTER-V**

MEDICAL MICROBIOLOGY (STUGMB5/DSC2)

L	T	P
4	0	2

Course Name: Medical Microbiology
Course Credit Hour: 4 hrs

Course Code: STUGMB5/DSC2
Total Contact hour: 60 hrs

Course Objective:

This course provides learning opportunities in the basic principles of medical microbiology and infectious disease. It also provides opportunities to develop informatics and diagnostic skills, including the use and interpretation of laboratory tests in the diagnosis of infectious diseases.

Course Description:

Medical Microbiology is a three-year post-graduate programme dedicated to cover the medical and molecular aspects of immunology, mycology, virology, and bacteriology to infection. The programme equips students with the knowledge of diagnosing and treating diseases caused by bacteria, fungi and parasites. It covers medical and molecular aspects of microbiology and immunity to infection, incorporating traditional and current methods of laboratory diagnosis, treatment, epidemiology and management of infection.

Course Contents:

Unit I: Bacterial infection: Etiology, epidemiology, pathogenesis, symptomatology, laboratory diagnosis, treatment and prophylaxis of the following: a) Cholera, b) Typhoid, c) Diphtheria, d) Tuberculosis e) Spirochetes

Unit II: Viral infection: Etiology, epidemiology, pathogenesis, symptomatology, laboratory diagnosis, treatment and prophylaxis of the a) AIDS b) Polio c) Hepatitis

Unit III: Protozoan diseases: List of diseases of various organ systems and their causative agents. The following diseases in detail with Symptoms, mode of transmission, prophylaxis and control Malaria, Trypanosomiasis, Kala azar.

Unit IV: Fungal diseases: Brief description of each of the following types of mycoses and one representative disease to be studied with respect to transmission, symptoms and prevention

Cutaneous mycoses: Tinea pedis (Athlete's foot) Systemic mycoses: Histoplasmosis
Opportunistic mycoses: Candidiasis, aspergillosis

Course Learning Outcomes (CLOs):

CLO1. Understand the basic concept of medical microbiology and significance of diseases related to air, water, sewage.

CLO2. Discuss the Micro-organisms related to diseases and their control.

CLO3. Describe the Basic characteristics of Epidemiology, treatment, symptoms of diseases.

CLO4. Explain the basic control and treatment related to pathogenic diseases.

CLO5. Discuss the basic objectives, importance and functions HIV-AIDS, Polio, bacterial and fungal diseases.

INDUSTRIAL MICROBIOLOGY (STUGMB5/DSC2)

L	T	P
4	0	2

Course Name: Industrial Microbiology
Course Credit Hour: 4 hrs

Course Code: STUGMB5/DSC2
Total Contact hour: 60 hrs

Course Objective:

This course focus on the basis of Industrial microbiology technology and their techniques. It basically covers the Air microbiology, sewage microbiology, water microbiology etc. It also covers the scope and importance of sources of contamination of milk, desirable and undesirable changes in milk, milk borne diseases, Microbial examination of water, Water borne diseases etc.

Course Description:

Microbiology course involves the study of microorganisms with particular emphasis on the biology of bacteria, viruses, fungi and protozoan parasites. You will also cover aspects of the biochemistry, physiology and genetics of microorganisms. Introduction to Microbiology is appropriate for students with some background in biology and chemistry whose career path intersects the study of microbes or simply have an interest in microbiology. This course introduces the basic principles of microbiology examining the microbes that inhabit our planet and their effect on the biosphere.

Course Contents:

Unit I: Introduction to industrial microbiology: Sources of industrially important microbes, strain development, types of fermentation and fermenters, process optimization, and recent developments in fermentation technology.

Unit II: Downstream processing of microbial products: Filtration, centrifugation, cell disruption, liquid-liquid extraction, chromatography, membrane processes, drying (lyophilization and spray drying), and crystallization

Unit III: Fermentation economics: Basic objective for successful economically viable fermentation process, cost break down for well-established fermentation processes, market potential of the products, cost aspects of various stages in the processes development including effluent treatment.

Unit IV: Production aspects: Microbial strains, substrates, strain improvement, flow diagrams, product optimization, and applications of industrial alcohol (ethanol and butanol), amino acids (lysine, phenylalanine, tryptophan), antibiotics (cephalosporins, tetracyclines, polyenes), enzymes and immobilized enzymes, SCP, microbial polyesters, biosurfactants, and recombinant products (insulin, somatostatin, thaumatin).

Unit V: Microbiology of foods: Vegetables, fruits, milk, fermented and non-fermented milk products, fresh meats, poultry and non-dairy fermented foods. Microbial spoilage of foods Food preservation: Chemical, physical and biological methods. Fermentation processes: Production of milk and milk products, plant based products, fish products, meat products and food beverages.

Course Learning Outcomes (CLOs):

CLO1. Understand the basic concept of industrial microbiology

CLO2. Discuss the downstream processing of microbial products such as Filtration, centrifugation, cell disruption, liquid-liquid extraction, chromatography, membrane processes, drying (lyophilization and spray drying), and crystallization.

CLO3. Describe the Basic characteristics of fermentation economics including basic objective for successful economically viable fermentation process, cost break down for well-established fermentation processes.

CLO4. Explain the basic knowledge microbial strains, substrates, strain improvement, flow diagrams, product optimization, and applications of industrial alcohol, amino acids, antibiotics and others

CLO5. Discuss the basic objectives, importance and functions microbial spoilage of foods food preservation such as Chemical, physical and biological methods.

**B.Sc. Microbiology 3rd Year
SEMESTER-VI**

MYCOLOGY (STUGMB6/C13)

L	T	P
4	0	2

Course Name: Mycology
Course Credit Hour: 4 hrs

Course Code: STUGMB6/C13
Total Contact hour: 60 hrs

Course Objective:

It is intended to impart basic undergraduate-level knowledge in the area of mycology. This course will introduce the students with the basic aspects of fungal classification and morphology, diagnosis, and disease production. To comprehend what diseases that the medically important fungal organisms cause and the details of the infection process. Lecture material supplemented with slides

Course Description:

This subject is three credit-hour course will examine the biology of the true fungi and other groups of organisms traditionally classified with the fungi. Topics covered will include taxonomy, life history traits, ecology, physiology, and evolutionary biology of the major classes and orders of fungi. Particular emphasis will be placed on the impact of fungi on human affairs. Laboratory exercises will emphasize the identification of these orders. Also get aware about common plant disease and their control measures for better plant productivity.

Course Contents:

Unit I: Introduction to mycology: Characteristics, Common fungal infections, lab diagnosis, Different specimens, Collection & transportation, Culture medias, Staining techniques, Oculomycosis, Otomycosis, Mycotic poisoning

Unit II: Superficial cutaneous mycoses: Introduction, A-etiology, pathogenicity, lab diagnosis and treatment) Taenia nigra, Piedra, Dermatophytosis

Unit III: Subcutaneous mycosis: Introduction, A-etiology, pathogenicity, lab diagnosis and treatment) Mycetoma, Sporotrichosis, Rinosporidiosis, Lobomycosis

Unit IV: Systemic mycosis: Introduction, A-etiology, pathogenicity, lab diagnosis and treatment) Histoplasmosis, Blastomycosis, Coccidiomycosis, Paracoccidiomycosis

Unit V: Opportunistic mycosis: Introduction, A-etiology, pathogenicity, lab diagnosis and treatment) Candidiasis, Cryptococcosis, Pencilliosis, Aspergillosis, Zygomycosis

Course Learning Outcomes (CLOs):

CLO1. To evaluate specimen acceptability of fungus

CLO2. Further ability to collect, label, identify, and log in specimens accurately, know how for transportation requirement of fungus.

CLO3. Ability to perform appropriate laboratory techniques used in the processing of specimens and identification of parasites and fungi

CLO4. Remedial measures for fungal infections

CLO5. Ability to describe basic morphology and physiology of parasites and fungi

**B.Sc. Microbiology 3rd Year
SEMESTER-VI**

ENTREPRENEURSHIP (STUGMB6/C14)

L	T	P
4	2	0

Course Name: Entrepreneurship
Course Credit Hour: 4 hrs

Course Code: STUGMB6/C14
Total Contact hour: 60 hrs

Course Objective:

This course focus on the basis of Skills of bio-entrepreneur and biotechnology entrepreneurship. It basically covers the patenting, licensing and partnership in biotechnology industry It also covers the scope and importance of product development in biotech industries. It also includes about the marketing of the desired pharmaceutical drug.

Course Description:

This is a course to introduce the student to understanding creative abilities, recognizing their creative abilities, changing their way of viewing creativity, understanding who they are as a creative person, promoting innovation in themselves and others, and demonstrating productive thinking.

Course Contents:

Unit I: Introduction: Basic definition, history and scope of Biotechnology Entrepreneurship

Unit II: Biotechnology Marketing & Companies: Biotechnology in capital market; Initial Public Offering (IPO) in the capital market; examples of success and failure of biotechnology companies and the possible reasons; factors that influence success of company; product selection; failure of the product ; product development ; R&D with expertise ; cost of product development. Mergers and acquisitions of biotechnology companies: Celera Genomica and Axys Pharmaceutical; Monsanto and other companies (use other examples).

Unit III: Patenting, licensing and partnership in biotechnology industry: Patents on biological inventions, licensing revenue, selection of right partner; negotiations of the terms of the deal.

Unit IV: Entrepreneurship Skills: Entrepreneurship Skills of bio-entrepreneur, bio-entrepreneurial training; research experience, creativity, communication skills and other

attributes; participation in conferences, training and educational courses; institutes offering entrepreneurship courses.

Course Learning Outcomes (CLOs):

CLO1. Discuss the basic introduction of biotechnology entrepreneurship.

CLO2. Discuss the Biotechnology Marketing & industries.

CLO3. Describe the basic knowledge patenting, licensing and partnership in biotechnology industry.

CLO4. Explain the Major Entrepreneurship Skills.

CLO5. Discuss the Training, entrepreneurship courses, educational courses offered by various institutes.

**B.Sc. Microbiology 3rd Year
SEMESTER-VI**

PARASITOLOGY (STUGMB6/DSC3)

L	T	P
4	2	0

Course Name: Parasitology
Course Credit Hour: 4 hrs

Course Code: STUGMB6/DSC3
Total Contact hour: 42 hrs

Course Objective:

This course will enable students to acquire knowledge on the fundamentals of Parasitology. It enables them to understand emerging and advanced concept in host pathogen interaction and this course also focuses on the host parasite interaction which include etiology, pathogenicity, life cycle, lab diagnosis and treatment. This program will facilitate the students to acquire knowledge in fields various aspects and molecular tools used in clinical application in alleviation of human disease.

Course Description:

This course is mainly focused to understand emerging and advanced concept in molecular pathogenesis of disease and role of biotechnology in diagnosis, prevention and therapeutics. An understanding of the basic biology and life cycles of human parasites; human parasitic infections, including epidemiology, clinical features, laboratory diagnosis, treatment and prevention.

Course Contents:

Unit I: Introduction: Parasites, Classification of Parasites, Host, Types of host, Relationships between host and parasites

Unit II: Protozoa: (introduction, A-etiology, pathogenicity, life cycle, lab diagnosis and treatment)
Entamoeba, Giardia, Plasmodium, Leishmania, Trypanosoma

Unit III: Platyhelminthes: (Introduction, A-etiology, pathogenicity, life cycle, lab diagnosis and treatment) Taenia, Echinococcus

Unit IV: Nematelminthes: (introduction, A-etiology, pathogenicity, life cycle, lab diagnosis and treatment) Ascaris, Ancylostoma, Necator, Enterobius, Wuchereria

Unit V: Lab Diagnosis: Different specimens of parasitology, Collection & transportation. Processing of parasitological specimens

Course Learning Outcomes (CLOs):

CLO1. Understand the basic concept Parasitology and its importance.

CLO2. Discuss etiology, pathogenicity, life cycle, lab diagnosis and treatment of protozoan parasite.

CLO3. Discuss etiology, pathogenicity, life cycle, lab diagnosis and treatment of Platyhelminthes.

CLO4. Discuss etiology, pathogenicity, life cycle, lab diagnosis and treatment of Nematelminthes.

CLO5. Explain the method for collection and processing of parasitological specimens.

Text Books:

SEMESTER-VI**

TRANSCRIPTOMICS AND METABOLOMICS (STUGMB6/DSC3)

L	T	P
4	2	0

Course Name: Basics of Immunology
Course Credit Hour: 4 hrs

Course Code: STUGMB6/DSC3
Total Contact hour: 60 hrs

Course Objective:

The primary objective of this course is to develop knowledge on the basics of omics and their versatile applications as well as integration of omics approaches for improvement of life. This subject will help in the development of technical skills and knowledge on versatile techniques in Omics.

Course Description:

An introduction to workflows for the resolution and characterization of complex mixtures of biomolecules, from DNA to small molecule metabolites. The course will emphasize the potential and challenges of omic approaches and will include data handling tasks and demonstration

Course Contents:

Unit I: Gene, Genome and Genomics: Online genomics databases and tools. Standalone bioinformatics analysis of genomic data. Applications of genomics.

Unit II: Proteomics: Aims, strategies and methods. Bioinformatics tools in proteomics. Application of proteomics. Proteomics technologies: 2D-electrophoresis, MALDI-TOF mass spectrometry, yeast 2-hybrid system. Protein-protein interactions: experimental and computational methods, databases.

Unit III: Proteomics and Generation of Interactomics: High-throughput proteomics, Construction of interactomics, Bioinformatics and data visualization software for proteomics

Unit IV: Transcriptomics: Microarrays, EST, SAGE. Bioinformatical methods in transcriptomics. Application of transcriptomics

Unit V: Metabolomics: Technologies in metabolomics, Nutrigenomics, Other omics, Nuclear Magnetic Resonance Spectroscopy and Mass Spectrometry in metabolomics.

Course Learning Outcomes:

By the end of this course students will be able to:

CO1: Critically discuss information flow in biology, and evaluate the benefits of the different levels of omic data collection; discuss challenges to omic data collection;

CO2: Evaluate strategies to characterize a genome/transcriptome/proteome/metabolome;

CO3: Compare and contrast data from different "-omic" data collection approaches (genomics, transcriptomics, proteomics, metabolomics).

CO4: Identify appropriate applications for different omic approaches and Design an experimental strategy to exploit an omic analysis

CO5: Critically discuss the importance of controls and validation in 'omics strategies

CLINICAL RESEARCH (STUGMB6/DSC4)

L	T	P
4	2	0

Course Name: Clinical Research
Course Credit Hour: 4 hrs

Course Code: STUGMB6/DSC4
Total Contact hour: 60 hrs

Course Objective:

This course focus on the basis of Drug development process. It basically covers the (Preclinical, clinical and toxicological studies). It also covers the scope and importance of product development in biotech industries. It also includes about the marketing of the desired pharmaceutical drug.

Course Description:

Clinical research is a study conducted to understand health and diseases in the particular human body. It is branch of healthcare that governs the safety and effectiveness of medications, diagnostic products, devices, and treatment procedures proposed for human use. Clinical research is a branch of healthcare sciences in which research is conducted to understand health and diseases in human beings.

Course Contents:

Unit I: Drug discovery: Introduction, conventional drug design approaches, irrational Vs Rational, subacute and chronic toxicity studies. Irwin profile test, Drug development process (Preclinical, clinical and toxicological studies).

Unit II: Clinical Research: Past, Present and future Importance, Mile stones of regulations. FDA, US, Indian clinical research, global scenario of clinical research, Regulatory agency. Designing clinical trials- History, principles, scheme for conducting clinical trials, planning defining, objectives, variables, study populations, testable hypothesis.

Unit III: Ethical Issues in clinical research: Introduction, codes, declaration and guidelines, informed consent, special issues, Roles and responsibilities of IRBS, issues with ethics review.

Unit IV: ICH-GCP: History of ICH, Objectives, ICH structure, Guidelines, Future of ICH.

Course Learning Outcomes (CLOs):

CLO1. Understand the basic concept of Drug development process.

CLO2. Discuss the drug discovery, rational drug design. Delivery of biopharmaceuticals, Pre-clinical trials, and clinical trials.

CLO3. Describe the international pharmacopoeia, guide to good manufacturing practice, Manufacturing facility, sources of pharmaceuticals, production and analysis of final product..

CLO4. Explain the History of ICH, Objectives, ICH structure, Guidelines, Future of ICH.

Text Books:

- Research in Education- John V. Best, John V. Kahn 7th edition.
- Presentation skills - Michael Hallon- Indian Society for Institute education.

Reference Books:

- Practical Introduction of copyright.- Gavin Mcfarlane
- R2. Reference book on Thesis projects in Science & Engineering – Richard M. Davi.
